

# TrailerMate

## Team Jason

*Abdessamad Amadar*

*Malaurie Bernard*

*Sarah Bobillot*

*Emilie Fraumar*

*Killian Gonet*

*Réda Kharoubi*

*Antonin Laborde-Tastet*

**Reminder of the project**

**Schedule control & organization**

**Demonstrations**

**Next sprint goals**

**Next sprint organisation**

**Next sprint acceptance tests**

**Suggestions & Questions ?**

## Reverse gear library

**SCRUM Master : Emilie Fraumar**

**3 Goals**

**Trailer angle**

**Car automation**

**Obstacles detection**

3

11/22  
Sprint start

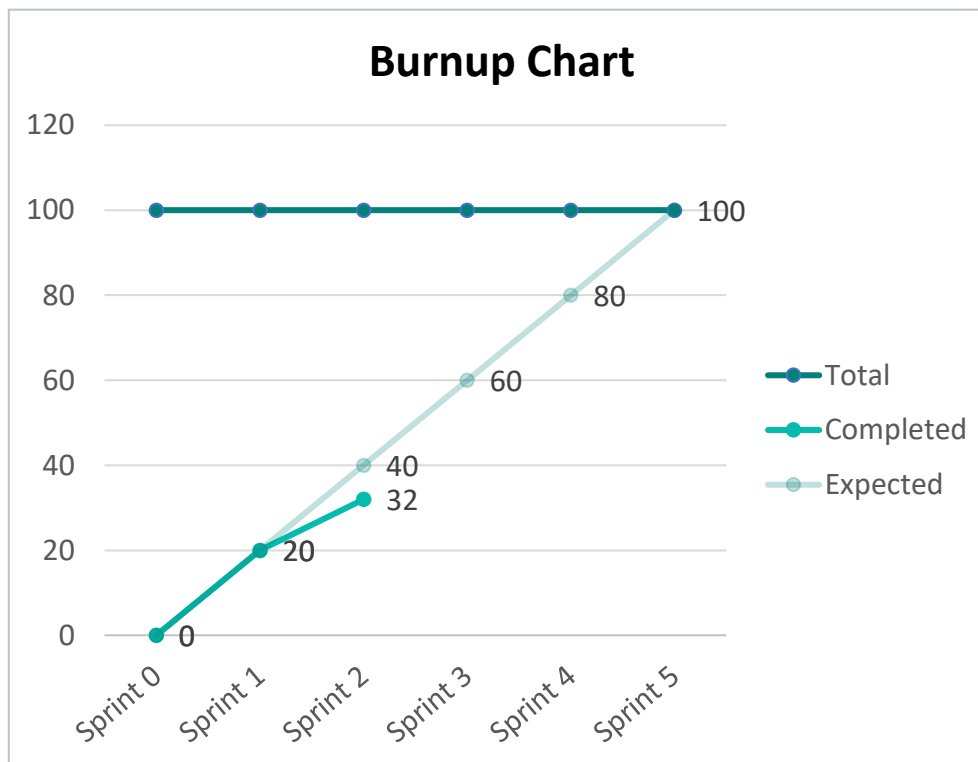

11/29  
'Real' start

Installation of the potentiometer

Programming  
and testing

3

Slight delay on the overall project

Better assessment of task complexity

3

Stopping in front of an obstacle *OK*

Detect obstacles with the trailer *OK*

Avoiding obstacles with the trailer  
*ABANDONED*

Closed-loop reverse control *OK*

Improve the wheel adhesion *NOT  
STARTED*

Measuring the angle of the trailer  
*STARTED BUT NOT FINISHED*

3

```
---  
stop_car_rear: false  
stop_car_front: true  
---
```

```
---  
stop_car_rear: true  
stop_car_front: false  
---
```

## Obstacle detection with the trailer

HOW ?

Connecting sensors directly to the car

Time

Efficiency

Cost

Using raspberry of the trailer

Time

Efficiency

Cost

3

## Demonstration sequence

Stopped car

Car is at 50cm  
of the obstacle

Order to move  
backward

Idle

Car move forward

Car stops

Car does  
not move

Car move backward

Order to  
move forward

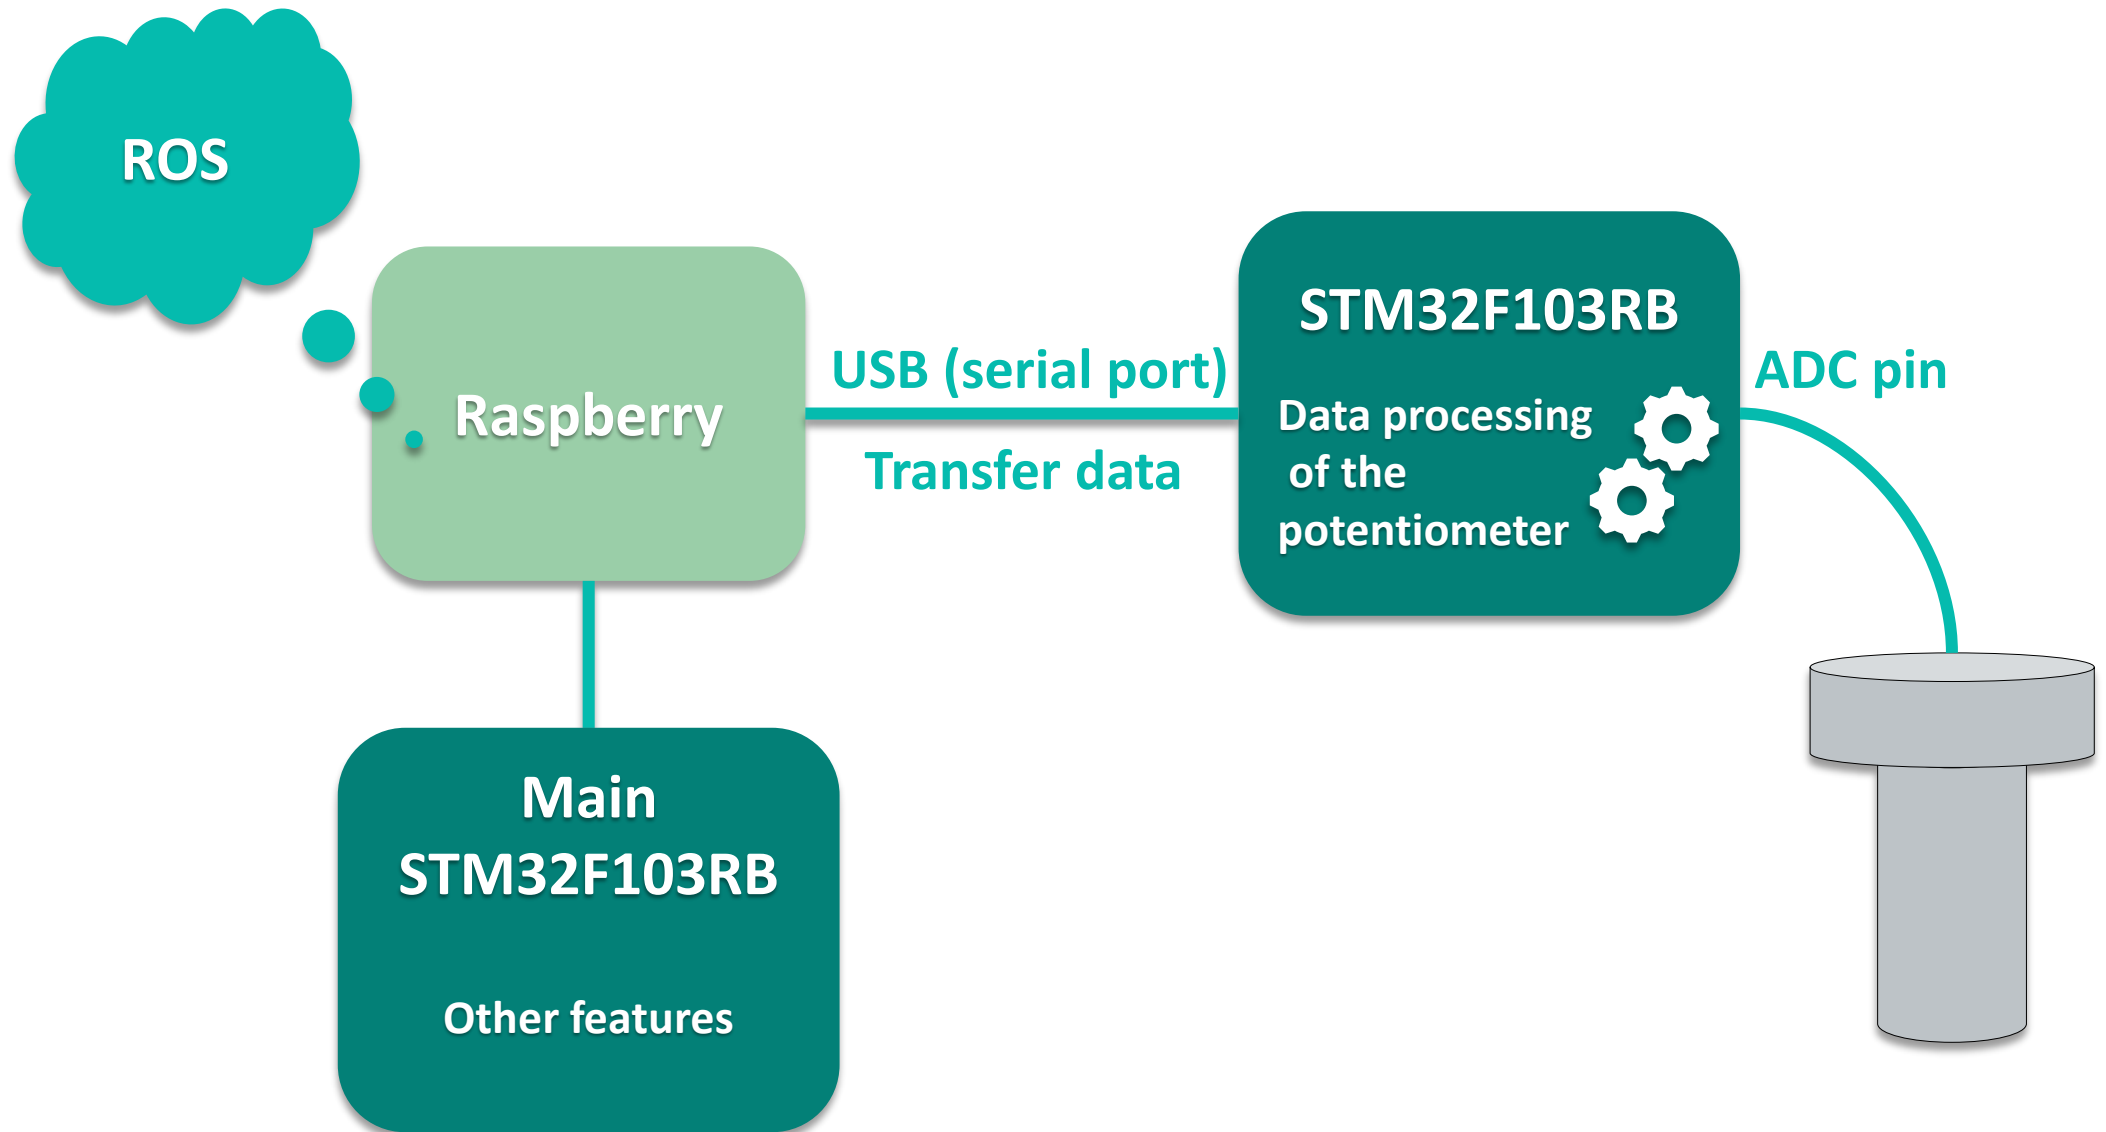

Order to  
move forward

3

Let's see the demonstration!

3

## Demonstration sequence

Stopped car

Moving the trailer the other side

Idle

Getting a value

Getting another value

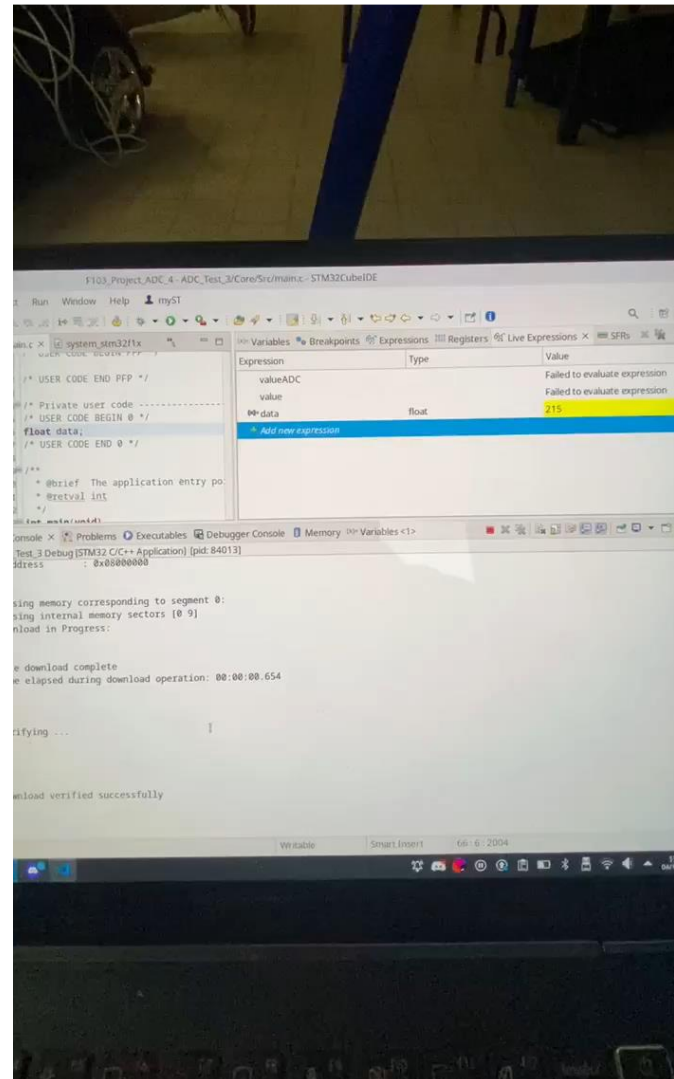

Moving the trailer

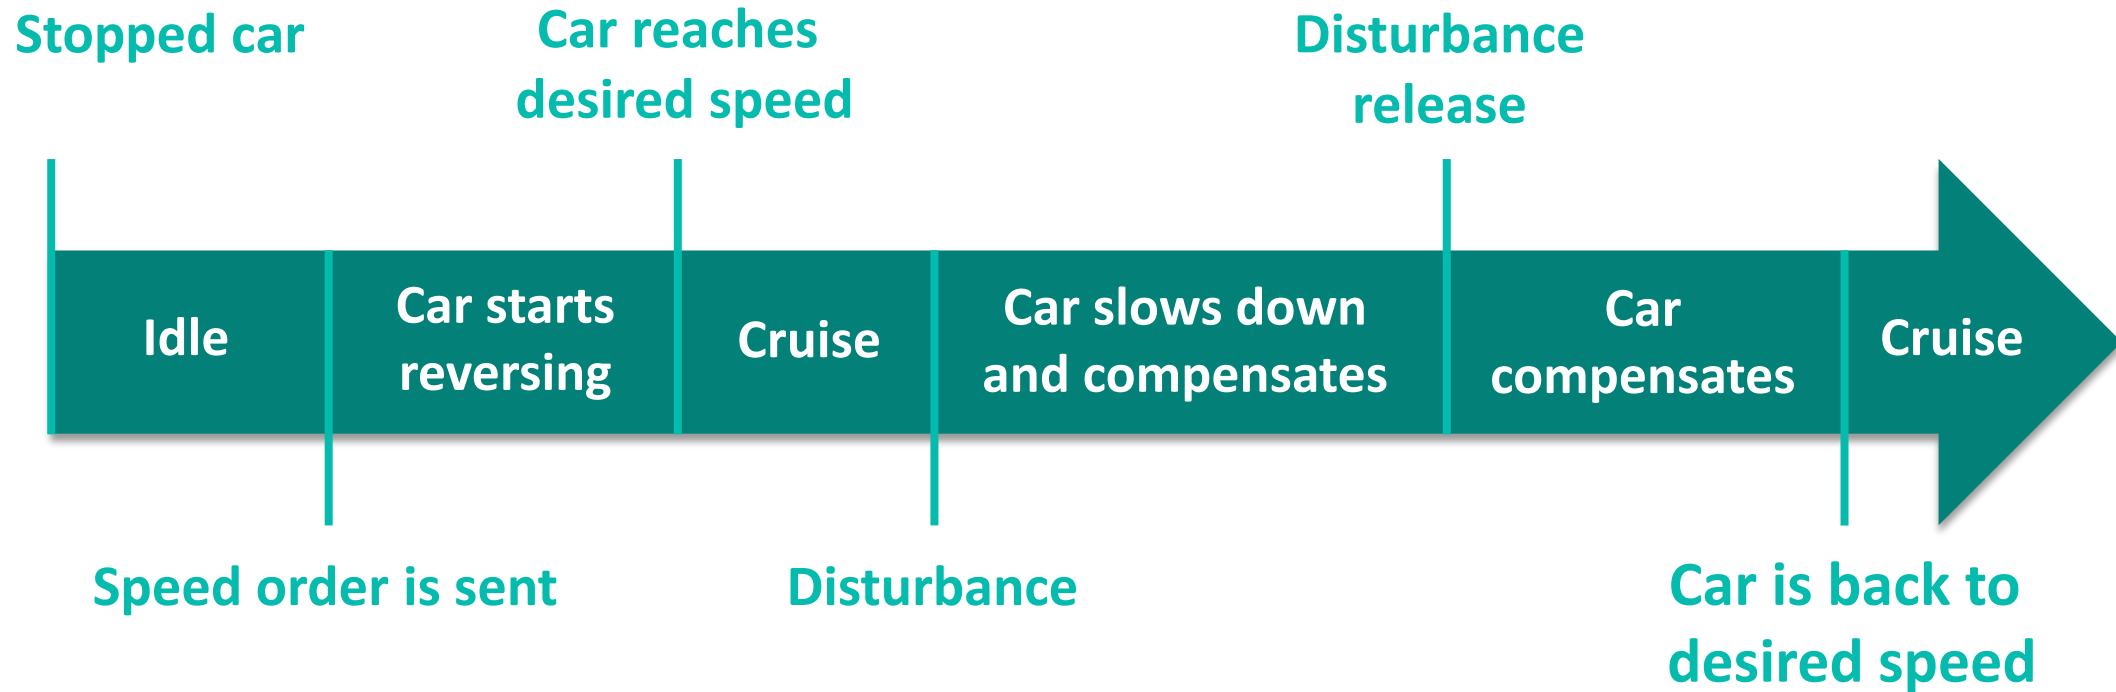

3

## Let's see the demonstration!

3

## Demonstration sequence

3

Let's see the demonstration!

3

## Car's steering control loop

The current control loop is operational ! But ... not very precise

Tolerance  
error

Overshoot

3

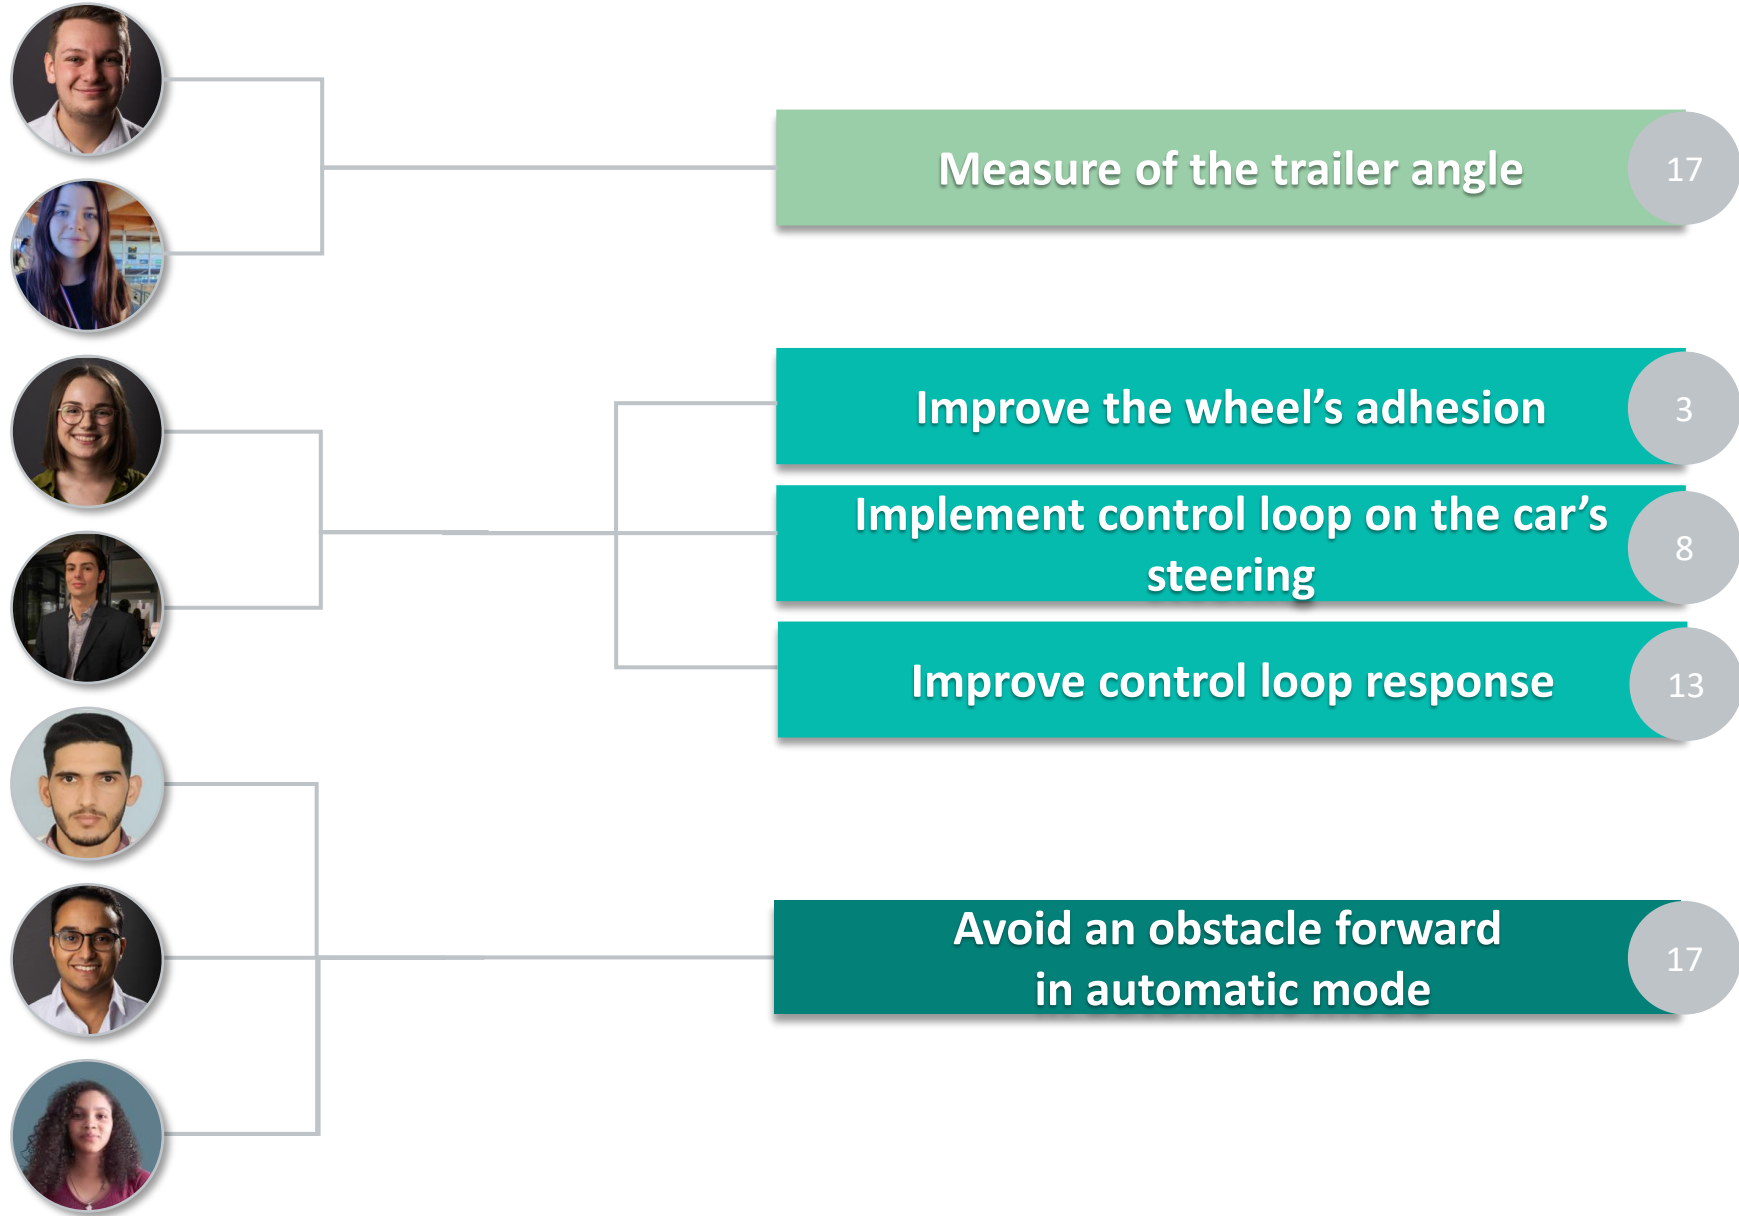

**SCRUM Master : Sarah BOBILLOT**

**3 Goals**

Trailer angle

Car automation

Obstacles avoidance

## Trailer angle

**Initial state:** The car is stopped.

**Action:** Turn the trailer manually.

**Result:** The sensor post the right angle of the trailer (at more or less 2 degrees)

Angle of the trailer

## Car automation

**Initial state:** The car is stopped.

**Action:** Ask the car to turn at a given angle.

**Result:** The car turns at the given angle.

Angle of the wheels

## Obstacles avoidance

**Initial state:** The car is moving forward.

**Action:** Put an obstacle in its path and run automatic mode.

**Result:** The car detects the obstacle, avoids it and continues.

# Suggestions & Questions ?

TrailerMate – Review 2

22/22
